

AURaweBS

Project Documentation & Technical Specification

BUILD . AUTOMATE . EVOLVE

Founder & Lead Architect: Suhas M R

Official Email: websitedesigns1408@gmail.com

Project Domain Focus: Web, AI, Automation & Digital Systems | Instagram: @aurawebs.ai

1. Executive Summary & Overview

AURaweBS is a modern digital agency platform designed to deliver high-performance web systems, AI conversational solutions, and workflow automations. Built as a high-speed Single Page Application (SPA), the website uses zero npm build dependencies, delivering instant page transitions and maximum security.

2. Core Programming Languages & Tech Stack

The website is engineered purely with native W3C web standards (Vanilla Web Stack) for ultra-fast performance, zero vulnerability overhead, and easy maintainability.

Technology	Responsibilities & Capabilities	Key File
HTML5	Structural markup, semantic elements, SEO metadata, and 10 integrated SPA view containers.	index.html
CSS3 (Vanilla)	Dark modern UI design tokens, Glassmorphism, CSS Grid/Flexbox, keyframe animations.	style.css
JavaScript (ES6+)	Client-side History API router, AI Chatbot engine, dynamic modal views, FormSubmit dispatcher.	script.js
JSON	Deployment rewrite rules and single-page routing configuration for Vercel platform.	vercel.json

3. Technical Architecture & System Engine

A. Client-Side Vanilla JS Router (script.js)

- Intercepts navigation clicks using 'data-route' attributes without browser reload.
- Manipulates window.history using pushState() and popstate event listeners.
- Dynamically updates document.title and meta description tags for SEO compliance.

B. AURA Interactive AI Assistant

- Client-side conversational assistant built with instant keyword recognition rules.
- Answers user queries on services, project budgets, case studies, and founder info.
- Features suggestion chips, chat history reset, and simulated typing delay.

C. Asynchronous FormSubmit Email Dispatcher

- Sends project brief submissions directly to websitedesigns1408@gmail.com.
- Operates asynchronously with native fetch() API without requiring a backend server.
- Transitions UI to an instant on-screen success card with a WhatsApp ping option.

4. Featured Showcase Projects Tech Stack

* Hotel Vaibhava Grand Platform:	React, Next.js, TypeScript, Tailwind CSS, WhatsApp API
* PlayZone Arcade Gaming Suite:	HTML5 Canvas (60FPS engine), Web Audio API, Vanilla JS
* Cart Recovery & Workflow Engine:	n8n, Node.js, Webhooks, WhatsApp Cloud API, Redis
* AURA AI Knowledge Base:	Python, OpenAI GPT-4, LangChain, Pinecone Vector DB

5. File Structure Overview

index.html	- Single Page Application HTML markup containing all 10 views
style.css	- Vanilla CSS design system, dark aesthetic & animations
script.js	- Vanilla JS router, AI chatbot logic & FormSubmit dispatcher
vercel.json	- Vercel platform configuration for SPA URL rewrites
logo.jpg	- Official brand logo asset for header and metadata
images/	- Subdirectory with preview graphics (hotel, playzone, spark, etc.)
